IDENTIFIERS	*Los Angeles Community College District CA; *Weekly Student Contact Hours

ABSTRACT

This data book presents statistical data relating fall weekly student contact hours (WSCH) per full-time equivalent faculty (FTEF), from 1993-1997, by discipline, for each of the Los Angeles Community College District's nine colleges. Introductory comments indicate that between 1981 and 1997, faculty engaged in instruction declined from over 2,700 full-time equivalents to just over 2,100. The report tracks WSCH, FTEF, and the WSCH/FTEF ratio from 1993 through 1997. ESL, PACE, GAIN, and some other special classes within the various disciplines have been identified for organizational purposes. All WSCH figures shown in tables, and those used for the calculation of WSCH/FTEF, include positive attendance and daily school contact hour (DSCH) type classes. Noncredit classes and apprenticeship courses are tracked in this report, and are shown under their appropriate departments or divisions. The intent of this report is not only to show trends on selected variables, but also to facilitate the positing of "what if" questions such as the production of WSCH at various levels of faculty FTE and WSCH per FTEF ratios. CHANGE IN INSTRUCTIONAL STAFFING AND WORKLOAD

The ratio of student contact hours to faculty time rose in Fall 1997 after four years of continual decline. WSCH/FTEF (Weekly Student Contact Hours per full-time equivalents faculty) increased from 443 in Fall 1996 to 474 in Fall 1997. This reversed a trend of steady decline in existence since the peak of 515 WSCH/FTEF in 1992.

The Department/Division Data Book is an annual report which has been produced in some form in the Los Angeles Community College District since 1981. Over that period, faculty engaged in instruction have declined from over 2,700 full-time equivalents to just over 2,100 in Fall 1997. Most of this change took place between 1981 and 1986, and total FTEF levels have remained relatively constant since that point. The numbers of regular contract faculty have continued to be reduced fairly steadily over the whole period, however, while hourly-rate FTEF has grown since 1986 to even exceed the 1981 level.

These changes have been detailed in Figure 1 along with those in enrollment, measured by WSCH (Weekly Student Contact Hours). These latter values, traced by the heavy line of Figure 1, have fluctuated greatly over this period, dropping from just under 1.3 million WSCH in 1981 to under 900,000 in 1985. WSCH rebounded to almost 1.1 million WSCH in 1991 and then declined through 1995 before rising to the current level of just over 1 million.

In addition to charting the changes individually both in faculty and student enrollment, Figure 1 can be read as tracing the adjustments in either the number of instructional staff or enrollment necessary to hold WSCH per FTEF constant at a goal of 510, generally recognized as an economically efficient

level and equivalent to an average class size of 34. Figure 1 is scaled so that the WSCH line and the FTEF bars coincide for Fall 1992, the only point at which WSCH per FTEF for the District has risen above 510. The figure thus indicates that in Fall 1997 approximately 200 less faculty FTE could have serviced the existing enrollment if the efficiency goal could have been achieved. Conversely, an additional 70,000 WSCH (roughly 7,200 students) could have been served with the classroom staff deployed in that semester if the 510 standard had been achieved. This would have been equivalent to the enrollment of one of the smaller colleges in the District.

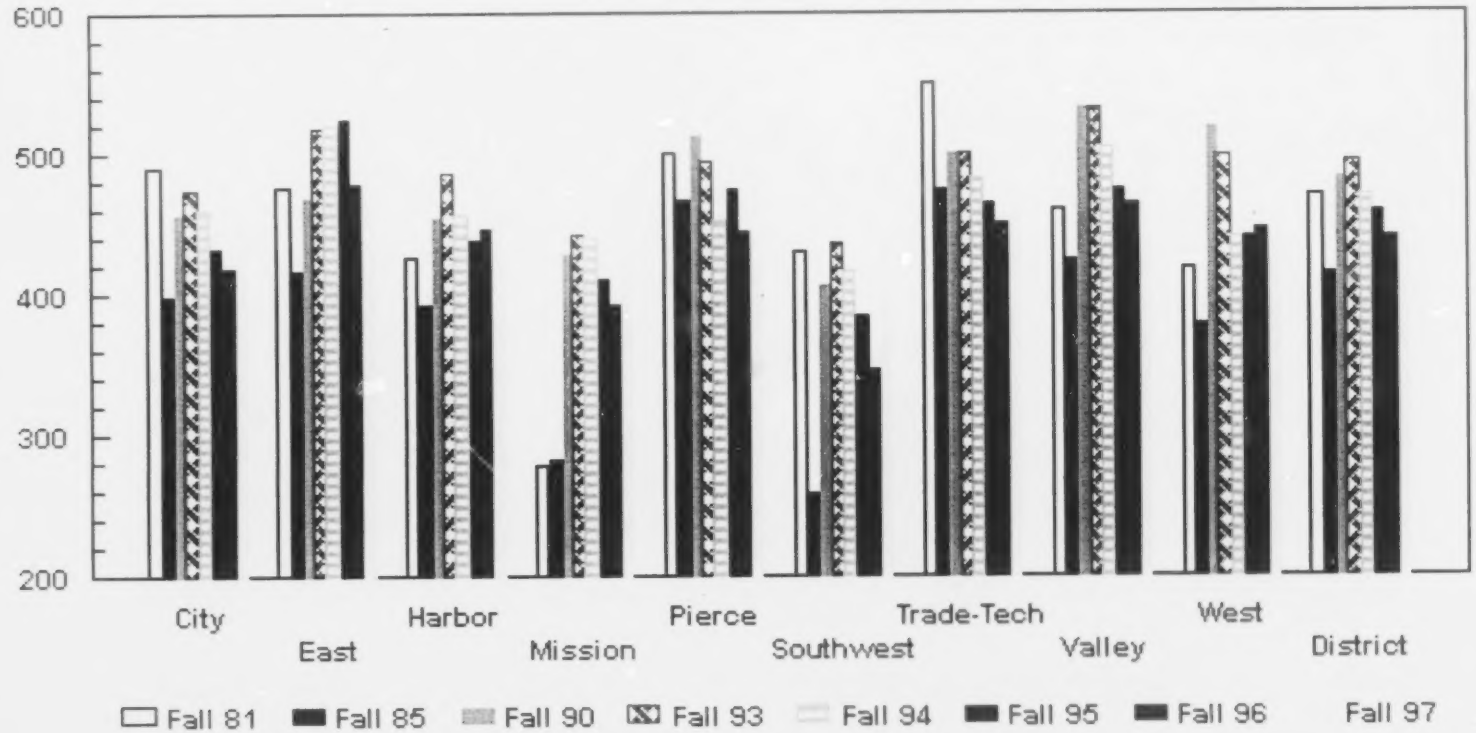
*Includes "overbase" hourly-rate. This "overbase" FTE is not shown in the detailed departmental listings in the "Hourly" column but is included in the total FTE.
**District totals include Instructional Television and International Education not otherwise shown in any of the individual colleges.

Table 1 shows college level aggregates for the past five years for credit WSCH, faculty FTE and WSCH per FTEF. Almost all of the colleges increased their WSCH per FTEF significantly in Fall 1997 due to the general enrollment growth. In four cases, Mission, Pierce, Southwest and Valley, enrollment was able to grow even while sizeable reductions in FTEF were being made. At three other colleges, City, Harbor and Trade-Tech faculty numbers were basically stable while enrollment grew. East increased faculty substantially, but its enrollment grew even more so that WSCH per FTEF also increased. Only West, where enrollment in WSCH terms actually declined slightly, did not increase its WSCH per FTEF figure.

Figure 2: Change in WSCH per Faculty FTE
Fall Semesters, 1981-1997



BEST COPY AVAILABLE

The recent changes in WSCH per faculty FTE need to be seen in the somewhat longer term as well. Figure 2 compares the past five years with WSCH per FTEF figures at various points since 1981. This puts the improvements of Fall 1997 in some perspective. Though all but West increased in WSCH per FTEF, and there it has been held constant for the past four years, all of the colleges except Mission and Southwest are still significantly below levels previously attained. And, at those two latter schools, their Fall 1997 WSCH per FTEF figures were still below the District average.

ORGANIZATION OF THE COLLEGE AND DEPARTMENT LISTINGS

The basic organization of this report is by department or division within each college. In many departments and divisions, disciplines have been clustered where subject matter is closely related and a degree of overlap in staffing exists. Business, Finance, Management, Marketing and Supervision, for example, have been clustered, but Accounting has been left out of that grouping, since there is generally little overlap in staffing between it and the other disciplines. These clusters are not named but are separated within each department or division by a subtotal line. The last cluster in each department/division is frequently a miscellaneous category, and no close similarity of these disciplines is necessarily implied.

ESL, PACE, GAIN and some other special classes within the various disciplines have been identified for organizational purposes. ESL classes have been shown separate from the rest of the disciplines of which they are a part, but within the overall departmental or division grouping. PACE classes have been listed by their discipline, but grouped separately as a PACE department on each campus. GAIN classes have been given similar treatment. Finally, effort is made to show sub-discipline variations in Load such as the distinction between activity and lecture courses in Physical Education, and between lower and upper levels of ESL instruction.

All WSCH figures shown in the following tables and those used for the calculation of WSCH/FTEF include Positive Attendance and DSCH (Daily Student Contact Hour) type classes. These figures have been calculated from the most complete FTES (Full-Time Equivalent Student) reports and thus represent as much as possible the full instructional activity over the course of each semester. Figures may differ somewhat from those compiled at the first census point for each semester. This makes relatively little difference in college totals for credit programs, but it can affect individual disciplines significantly. Programs such as Learning Skills and Office Administration that offer open laboratories with positive attendance accounting may be slightly larger than would be the case using first census estimates of WSCH. Colleges that use positive attendance accounting for all or part of their PACE programs will generally find these subjects reduced somewhat. Tutoring is almost everywhere seriously impacted, with the reduction running as high as 80% or more in several cases.

Non Credit classes as well as Apprenticeship courses are tracked in this report, and are shown under their appropriate departments or divisions. However, all such classes are grouped separately whenever college summaries are shown, for two reasons. First, both Non Credit and Apprenticeship classes are funded by the state at approximately half the rate of regular classes. Thus, summary WSCH per FTEF ratios that included these classes would not be truly comparable. Secondly, FTEF and WSCH data for these classes are less

accurate than in other areas. We have attempted to systematically collect the faculty FTE figures for the past four years for these areas, but they may still be subject to some error, since many of the college academic affairs offices treat these areas as specially funded programs, and thus outside of their normal record keeping systems.

The intent of this report is not only to show trends on selected variables but also facilitate the positing of "what if" questions such as the production of WSCH at various levels of faculty FTE and WSCH per FTEF ratios. Specific questions will necessitate different sortings and groupings of disciplines and the ability to work with the data in a spreadsheet environment. To this end, all Fall 1997 data as well as that from earlier semesters can be provided to the colleges in electronic form on request.
